

# TWAMP Light Extensions for Segment Routing Networks

*draft-gandhi-ippm-twamp-srpm-00*

*Rakesh Gandhi - Cisco Systems ([rgandhi@cisco.com](mailto:rgandhi@cisco.com)) - Presenter*

*Clarence Filsfils - Cisco Systems ([cfilsfil@cisco.com](mailto:cfilsfil@cisco.com))*

*Daniel Voyer - Bell Canada ([daniel.voyer@bell.ca](mailto:daniel.voyer@bell.ca))*

*Mach(Guoyi) Chen - Huawei ([mach.chen@huawei.com](mailto:mach.chen@huawei.com))*

*Bart Janssens - Colt ([Bart.Janssens@colt.net](mailto:Bart.Janssens@colt.net))*

# Agenda

- Requirements and Scope
- History of the Draft
- Summary of Extensions
- Next Steps

# Requirements and Scope

## Requirements:

- Delay and synthetic Loss Measurement
- Support stand-alone direct-mode Loss Measurement

## Scope:

- RFC 5357 (TWAMP Light) defined probe messages
- User-configured IP/UDP path for probe messages

# History of the Draft

- Feb 2019
  - Draft was published - *draft-gandhi-spring-twamp-srpm-00*
- Mar 2019
  - Presented *draft-gandhi-spring-twamp-srpm-00* at IETF 104 Prague in SPRING WG
- July 2019
  - Presented *draft-gandhi-spring-twamp-srpm-01* at IETF 105 Montreal in IPPM WG
    - Slide 9 Titled - Applicability of STAMP
- Nov 2019
  - SPRING Chairs announced in the meeting the agreement with IPPM chairs to progress the draft in SPRING WG
  - Presented *draft-gandhi-spring-twamp-srpm-04* at IETF 106 Singapore in SPRING WG
- Mar 2020
  - Moved STAMP support to *draft-gandhi-spring-**stamp**-srpm-00*
  - Keep TWAMP Light support as informational in *draft-gandhi-spring-**twamp**-srpm-08*
- Jul 2020
  - Presented *draft-gandhi-spring-twamp-srpm-09* at IETF 109 in IPPM WG
- October 2020
  - Split draft into *draft-gandhi-**spring**-twamp-srpm-11* and *draft-gandhi-**ippm**-twamp-srpm-00*

# TWAMP Light - Session-Sender Control Code Field

## In a Query: Session-Sender Control Code

0x0: Out-of-band Response Requested.

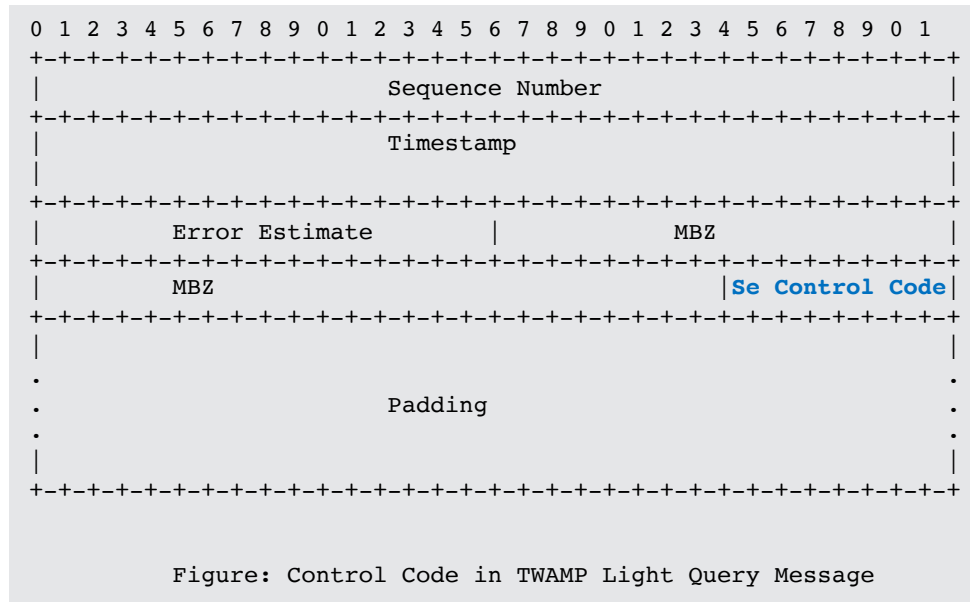

This is the existing behavior.

0x1: In-band Response Requested.

Indicates that this query has been sent over a bidirectional path and the probe response is required over the same path in the reverse direction.

0x2: No Response Requested.

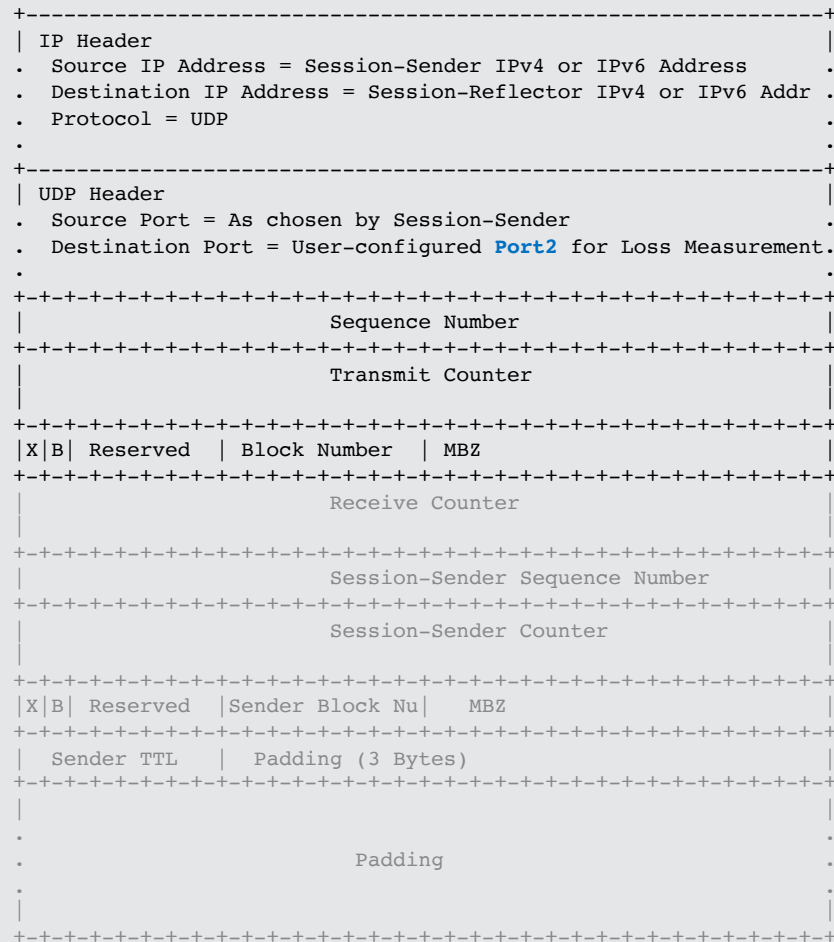

- With this, the Session-Reflector node does not require any additional state for PM.

# TWAMP Light - Stand-alone

## Direct-mode LM Message Format

- Stand-alone Direct-mode Loss Measurement (LM) query and response messages defined
  - Hardware efficient counter-stamping
    - Well-known locations for transmit and receive traffic counters
  - Stand-alone LM message, not tied to DM
- Direct-mode LM message format is also defined for authenticated mode
- User-configured destination UDP **Port2** is used for identifying direct-mode LM probe packets
- Does not modify existing TWAMP Light (which is for DM) procedure as different destination UDP port is used for direct-mode LM

# IPPM Draft Review Comments

1. Extensions are not specific to SR, document should be renamed
2. Draft status:
  - a) Draft defines extensions for TWAMP Light (is not a new protocol)
  - b) Draft is currently informational. Should be proposed standard due to protocol extensions
  - c) Update RFC 5357 due to new field (control code) in the message
3. Does not introduce any new security issue with this draft
4. Editorial
  - a) Define Abbreviations (BSID, SRH, HMAC-SHA)
  - b) Use Session-Sender, Session-Reflector terms
  - c) Show entire test packet with session-sender control code field
  - d) Indicate packet loss for synthetic vs. direct-mode loss
  - e) Move Receive Counter and other Response message fields to Section 4.1 from 3.2
    - Explain how the counters and sequence numbers are used to do loss measurement
5. Extend ICMP for direct-mode loss measurement – out of scope

# SPRING Draft Review Comments

1. Destination UDP port used has zero UDP checksum with IPv6 header
  - Add Reference for RFC 6936 in Security Section
2. Add references for well-known terms “Link” and “Congruent paths”
3. Add reference for Yang data model draft in provisioning model section
4. Liveness is to compute “connection loss” performance metric
  - Similar to the widely deployed synthetic packet loss metric
5. Editorial
  - Control-channel signaling -> TWAMP-control protocol
  - Indicate packet loss for synthetic vs. direct-mode loss
  - Use test packet term for query message
  - H/W timestamps required -> H/W timestamps recommended
  - IPv6 address ::1/128 or ::FFFF:127/104
  - Clarify - Section 4.1.4.2 and 4.2.2.2 depict the packet format with word “as needed” for inner IP Header.

# Next Steps

- Welcome your comments and suggestions
- Request IPPM WG adoption

# Thank you
